November 3rd, 2022

Submitted by Miri Naor Elias ADV. on behalf of Synamedia Limited To Mr. Sh. Anil Kumar, Bhardwaj, Advisor (B&CS), TRAI By emails: advbcs-2@trai.gov.in; jtadv-bcs@trai.gov.in

Re: THE TELECOMMUNICATION (BROADCASTING AND CABLE) SERVICES INTERCONNECTION (ADDRESSABLE SYSTEMS) (FOURTH AMENDMENT) REGULATIONS,

2022 (Consultation Paper No. 12/2022)

Synamedia would like to thank TRAI, Telecom Regulatory Authority of India, for the opportunity to contribute to the Draft Regulations 2022, and the System Requirement for Digital Right Management (DRM).

1. Introduction

Synamedia has been built on the foundation of two well-known companies: Scientific Atlanta and NDS Limited, which were both acquired by Cisco Systems Inc. In 2018, Synamedia was launched as an independent company stemming from its pioneering expertise and leadership for over 30 years of servicing the sports and media entertainment industries with the most advanced broadcast security and technology solutions.

Today Synamedia is the largest global provider of video solutions with over 200 pay TV and media customers worldwide. Synamedia is an industry leader in piracy intelligence, content protection and anti-piracy technology, with 30+ years of experience in protecting content and disrupting pirate activity.

2. Suggested Amendments

We have carefully read the proposed regulations and in accordance with the hearing procedure, attached to this letter are two tables summarizing the issues in which Synamedia believes that there is a reason to introduce amendments to the regulations language.

Format for stakeholders' response on issues related to 'System Requirement for Digital Right Management (DRM)' on issues other than those proposed in this CP

In some cases, like for testing purposes, the UI or other means should allow authorized personnel to manage the client devices. Irrelevant for DRM which is cardless by its nature Much of this belongs to the Control Plane that drives the DRM and not the DRM per se. Independently from whom? Besdides, DRM by itself can't detect piracy, it should be notified by some other parts of the ecosystem about pirate devices that need to be blacked out.		

		T	
			DRM doesn't deliver channels. It is not aware of the
			channel names, LCN, etc. In the HE DRM may encrypt
			content, but mostly it contorls license delivery to the
7	13	No	requesting client devices.
8		No	Probably doesn't belong to DRM
-	17	110	Not sure the regulator should state such requirement.
			DPO should negotiate the numbers with the DRM
9	18	No	vendor.
			Hybrid STB should be defined - not clear what is meant.
			Is DRM for IPTV and something else for OTT? Every
			application should regulate access to its content
			independently, so the content decryption keys are only
			delivered in licenses of the system that deliveres the
10	21	No	content.
11	22	No	Not sure it's a relevant requirement
12	26	No	In my opinion Bouquet is irrelevant for DRM system
			Pure DRM may be just a slave of SMS and not have any
13	28	No	DB at all
			Is this about the key rotation or license renewal
			period? If the former, this is probably not feasible in
			the current systems in the industry. The latter is
			possible but in big deployments creates a lot of traffic
14	30	No	between the clients and the HE.
15	22.27	No	Perhaps a separate IPTV clause is required - not directly
15	33-37	No	related to DRM
			Too strong requirement, preventing features like Catch-
			up or Start-over. In modern systems client-only PVR
16	37	No	incurres significant cost addition to the STBs.
10	37	110	incurres significant cost addition to the steps.
			A mix of losely bound requirements:
			a) second part actually prevents PVR
			b) limits implementation of a home gateway
			c) DRM can't prevent putting a camera in front of the
			TV screen and capture the video
17	38	No	d) - f) OK
18	40	No	whenever required instead of 'regular intervals'
19		No	this is for DPO not DRM
20		No	not clear at all
21	44	No	not related to DRM
			this really limits the Operator to deliver content only to
			STBs. Most of the Operators in the world and in India
		a.	want their DRM protected content to be delivered to
22	45	No	mobile devices as well.
			DRM contradictions in the transport of the Contradiction of the Contradi
22		No	DRM can't distinguish between Operator's (DPO's) ads
23	48	No	and the ones coming from third party
2.4		No	another statement above allowed client side PVR,
24	49	No	which contradicts this statement
		Nie	This is how the content distribution works in many
25	51	No	cases

		Do you agree with the Draft	
	Clause number of Draft Regulations	Regulations proposed in	
S no	2022	this CP (Yes/No)	Reasons with full justification for your response
1	1		not related to DRM, rather to the STB app
2	2		same
3	5		same
4	6		there is no VC in DRM
5	8		application, not DRM
			for anti-piracy the client may randomize the times of
			the FP on each device, therefore the schedule can't be
6	14		provided.
7	15		application, not DRM
Table	4 - STB Requirements for DRM for IPTV	/ services	
		Do you agree with the Draft	
	Clause number of Draft Regulations	Regulations proposed in	
S no	2022	this CP (Yes/No)	Reasons with full justification for your response
1	1		Which STBs?
2	5		unrelated to DRM
			the requirement is not clear. 'Messages of length of 1
3	6		to 120 or more characters shall be supported'?
4	13		not related to DRM
5	14		probably the application, not DRM
			there are many commands not related to security/DRM
6	15		that STB can fetch from other sources
7	17		Not sure what is meant by authorization keys here
			This is not what modern STBs and Operators offer.
			There can be a App Store with a limited set of allowed
8	18		Apps.
			It's again about blocking OTT, which contradicts the
9	21		common modern trend
40	missing		secure boot, secure load
